

CONFERENCES, FORUMS + GALAS

SEAMLESS DELIVERY. LASTING IMPACT.

OUR APPROACH

At Evolution Technical, safety and precision underpin every project we deliver. From initial system planning and technical drawings through to on-site installation and live operation, we carry out detailed risk assessments, method statements, and scheduling to guarantee safe and seamless technical execution.

Our technical crews and operators follow strict protocols, guided by experienced supervisors who ensure compliance with both local regulations and international best practices.

Evolution Technical is certified to ISO 9001, 14001, and 45001 standards, reflecting our commitment to quality management, environmental responsibility, and occupational health and safety. These frameworks guide the way we design, configure, and operate audio, video, lighting, rigging, and automation systems, ensuring efficiency, sustainability, and the highest level of protection for our clients, crews, and audiences.

By combining rigorous planning with accredited systems, we deliver technical solutions that not only achieve creative and operational ambitions but also uphold the highest professional and safety standards at every stage.

TECHNICAL SOLUTIONS FOR CONFERENCES + EXHIBITIONS

TECHNICAL SYSTEMS BUILT FOR IMPACT

Meetings, conferences, and exhibitions are where ideas are shared, connections are made, and brands are brought to life. Whether it's a focused boardroom session, a multi-track conference, or a large-scale expo, our team brings precision, polish, and technical expertise to every touchpoint.

At Evolution Technical, we tailor every element to the venue, format, audience, and client goals. Our in-house technicians and managers coordinate delivery end-to-end, supported by a scalable inventory of AVL systems and staging infrastructure, with warehouses in Riyadh and Dubai serving clients across Saudi Arabia, the UAE, and the wider GCC.

It's more than plugging in kit — it's about enhancing content, creating engagement, and enabling experiences. That's what we do best.

— Single contact from brief to showcall

— CAD + pre-visualisation for approvals

— Scalable AVL for all event formats

— Riyadh + Dubai warehouses serving GCC

— ISO-certified with full HSE compliance

Expertly planned, flawlessly executed — technical production without compromise.

TECHNICAL DESIGN

We translate creative concepts into fully engineered technical solutions. Our CAD and design teams produce detailed system drawings, cable plots, and rigging layouts, ensuring every audio, video, lighting, and automation element is designed for efficiency, reliability, and seamless integration on site.

HEALTH + SAFETY

Every technical project is underpinned by detailed risk assessments, method statements, and strict site protocols. Our certified crews and supervisors ensure full compliance with UAE and Saudi regulations, delivering audio, video, lighting, rigging, and automation systems that protect crews, clients, and audiences without compromise.

COMPLETE TECHNICAL SOLUTIONS FOR EVENTS IN THE GCC

From first design to final delivery, Evolution Technical provides complete AVL solutions for conferences, exhibitions, and live events across Saudi Arabia, the UAE, and the wider GCC. Our services cover every aspect of technical planning and execution, delivered by skilled crews with ISO-certified systems for safety, quality, and efficiency.

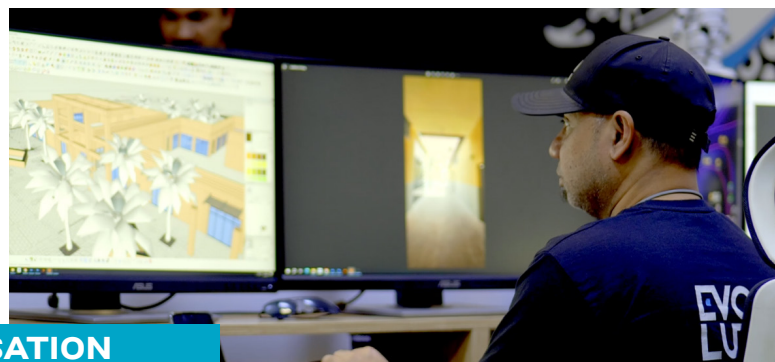

We manage every stage of technical delivery with precision and control.

From CAD planning and schedules to crew briefings and on-site coordination, we keep everything consistent, compliant, and seamless.

FULL-SERVICE TECHNICAL MANAGEMENT

We can design every detail of your event environment before the build begins.

CAD layouts and 3D pre-visualisation allow organisers to approve and refine plans with confidence.

EVENT DESIGN & PRE-VISUALISATION

Our audio packages are built for clarity, coverage, and reliability.

From intimate panels to large plenaries, every system is engineered for speech-first design on robust digital networks.

AUDIO SYSTEMS

We use lighting to focus attention and elevate the atmosphere.

Stage washes, brand accents, and dynamic looks are programmed for smooth cues and striking effects.

LIGHTING SYSTEMS

Precision where it matters — seamless technical production from start to finish.

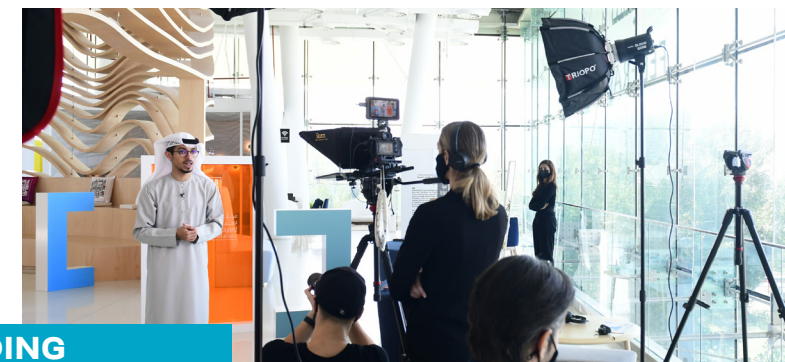

We deliver visual systems that keep content sharp and seamless.

LED, projection, and switching solutions are matched to the space and managed by expert technicians.

SCREENS, MEDIA & VIDEO CONTROL

We capture and relay events with broadcast-level precision.

From single-room coverage to multi-stage productions, our camera systems provide clear visuals in-room and for post-event use.

CAMERAS, IMAG & RECORDING

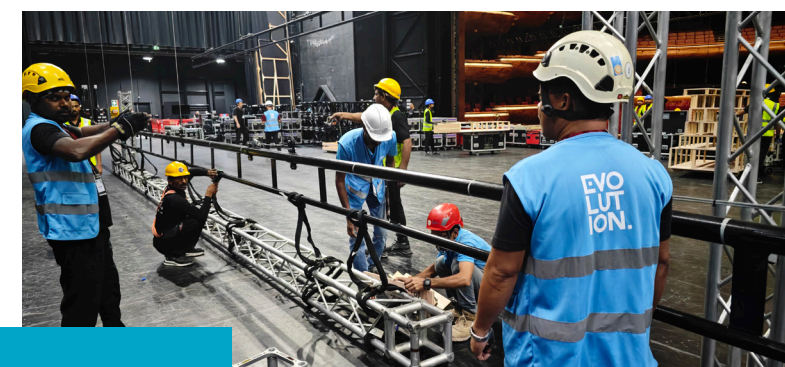

We provide the safe backbone that keeps your event running.

Certified rigging, resilient data networks, and redundant power ensure stability and compliance at every stage.

RIGGING, NETWORKS & POWER

Our health & safety processes are built for compliance and peace of mind.

Every project is supported by risk assessments, method statements, and trained crews working to ISO-certified standards.

HEALTH + SAFETY

FULL-SERVICE TECHNICAL MANAGEMENT

MANAGED WITH PRECISION — DELIVERED WITH CONTROL

Every event requires coordination across multiple disciplines, suppliers, and schedules. At Evolution Technical, our management approach keeps everything aligned — from CAD planning and build schedules to crew briefings and technical rehearsals. By managing each stage, we create a clear roadmap that prevents delays and ensures compliance at every step.

Our project managers combine practical knowledge with hands-on experience, giving them the tools to anticipate challenges and keep crews working efficiently. They oversee logistics, HSE documentation, and supplier integration while maintaining clear communication across all stakeholders.

The result is a streamlined process where technical systems are installed quickly, rehearsals are productive, and delivery runs seamlessly from doors open to final showcall.

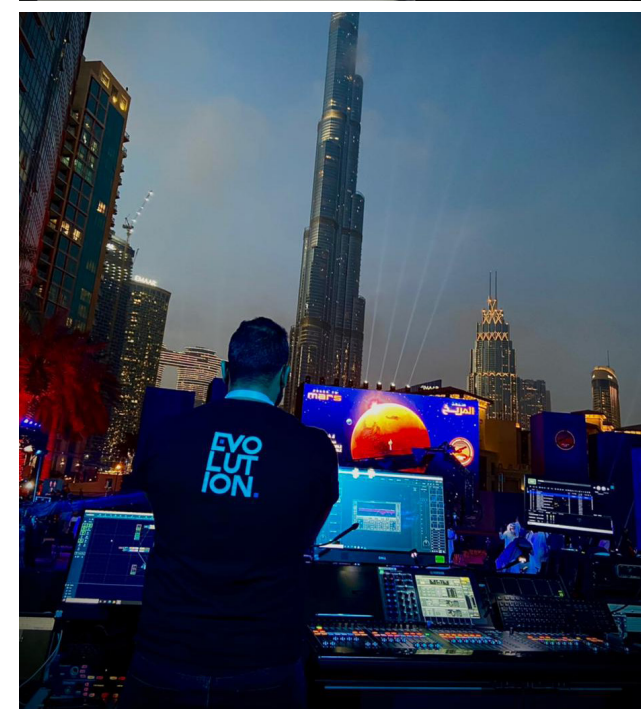

— CAD planning and scheduling

— Liaison with other project suppliers + venue coordination

— Crew management and rehearsals

— HSE documentation and compliance

— Clear communication throughout delivery

Our management approach is about more than coordination — it's about creating a disciplined structure where every part of the event flows smoothly. By integrating CAD planning, schedules, and approvals early, we eliminate unnecessary delays and give crews the clarity they need to deliver without compromise. Every supplier, contractor, and venue partner works from the same roadmap, reducing errors and ensuring accountability across the board.

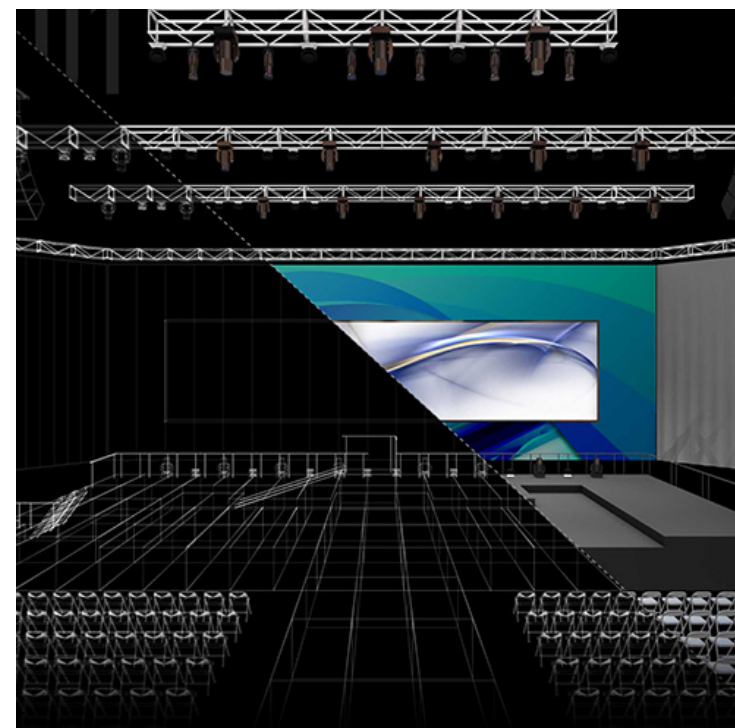

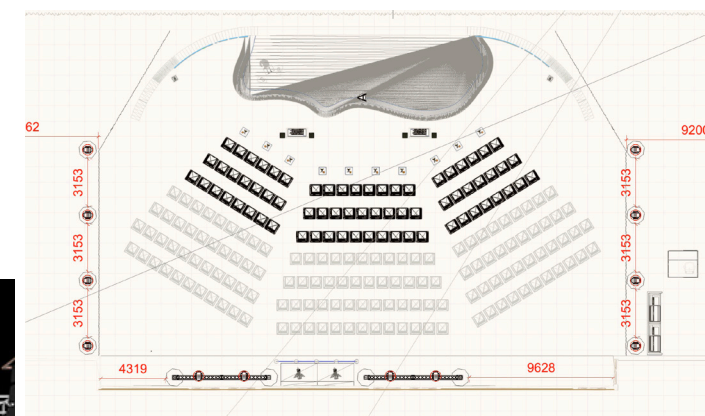

On site, our managers act as the central hub for communication, directing teams with clarity. They monitor progress, adapt to changes, and resolve challenges before they escalate. This hands-on leadership ensures technical operations stay consistent with the client's goals, keeping the entire production aligned, safe, and efficient from start to finish.

Venue constraints such as trim heights, access, and power capacity are factored into designs from the start to ensure technical solutions are practical as well as creative.

By showing the full environment in advance, we reduce uncertainty, improve collaboration, and give clients the peace of mind that their event will run exactly as planned.

By mapping out seating, staging, and sightlines through CAD and 3D pre-visualisation, we allow stakeholders to test different layouts and scenarios in advance. This reduces late changes and ensures every technical decision has been validated long before crews arrive on site.

EVENT DESIGN + PRE-VISUALISATION

PRECISION-LED DESIGN FOR FLAWLESS SHOWS

Technical success begins in the design phase. We use CAD layouts to map stages, seating, rigging points, and sightlines, ensuring plans meet both creative vision and venue restrictions. This early clarity saves time and prevents costly changes on site.

Our team enhances planning with pre-visualisation tools like WYSIWYG and Depence. These 3D models show exactly how lighting, video, and scenic elements will look and function, giving organisers and stakeholders the confidence to approve designs before build.

This combination of technical accuracy and creative visualisation helps clients make informed decisions, align teams, and reduce risks long before the event opens.

- CAD layouts for stage, seating, and rigging
- WYSIWYG + Depence 3D pre-visualisation
- Optimised sightlines and camera positions
- Brand-accurate screen + content previews
- Fully visualised for our clients before build starts

AUDIO SYSTEMS

CLEAR SPEECH — CONSISTENT COVERAGE

Sound defines how audiences connect with speakers. We design systems that prioritise clarity, delivering consistent coverage from the front row to the back of the hall. From wireless microphones to large-format line arrays, every setup is engineered for speech-first intelligibility.

Our audio networks are built on robust Dante and AVB systems, with redundancy paths that protect against failure. This ensures every keynote, panel, and breakout session is delivered with reliability and precision.

Experienced engineers tune each space, adjusting for acoustics and audience size, to provide natural sound that enhances rather than distracts from the content.

- Wireless + wired microphone solutions
- Distributed PA and line array systems
- Dante/AVB networks with redundancy
- Room tuning for speech intelligibility
- Experienced engineers for live mixing

Effective audio is the foundation of any successful conference or exhibition. Our systems are designed with precision to deliver consistent speech clarity across diverse spaces, no matter the size or acoustic challenges. By focusing on natural sound reproduction, we ensure that audiences remain engaged, presenters are comfortable, and content is delivered with impact.

Q&A sessions and multi-speaker panels are configured with tailored RF strategies, minimising interference and keeping dialogue seamless. By focusing on both technology and operator skill, we guarantee consistent audio delivery across every format, from small seminars to plenary halls.

SCREENS, MEDIA + VIDEO CONTROL

SEAMLESS CONTENT — RELIABLE DELIVERY

Every message relies on the screen. We provide projection and LED systems scaled to the venue, ensuring content is sharp, bright, and visible in any environment. Screens are matched with confidence monitors and preview systems to keep presenters comfortable and informed.

Content is managed through professional vision control and high-performance media servers, allowing us to switch seamlessly between sources. From sponsor loops and camera feeds to pre-recorded videos and live presentations, every transition is clean and controlled.

By combining reliable hardware with skilled operators, we deliver visual systems that work without interruption, even under the pressure of back-to-back sessions.

- LED walls + projection solutions
- Confidence monitors for presenters
- Vision control + live switching
- Media servers for content playback
- Redundant systems for reliability

Our technicians validate content formats in advance, ensuring files are delivered in the right resolution, aspect, and codec for the system in use. This attention to detail guarantees content not only plays back smoothly but looks as striking and professional as intended.

We manage every aspect of screen performance, from selecting the right resolution and brightness levels to ensuring content is formatted correctly. This attention to detail ensures sponsor graphics look sharp, presentations flow seamlessly, and live visuals deliver the right impact.

CAMERAS, IMAG + RECORDING

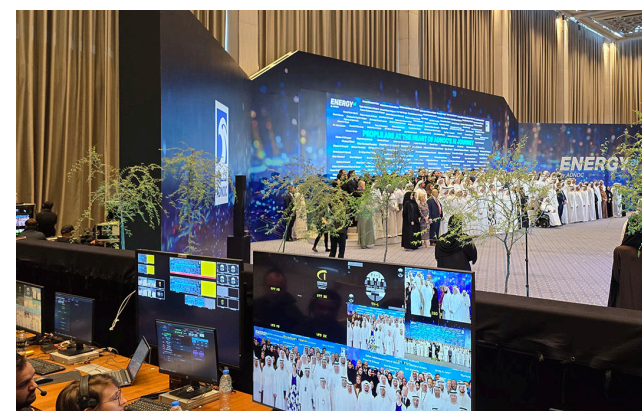

CAPTURE THE MOMENT — AMPLIFY THE MESSAGE

Cameras extend the reach of your event, magnifying speakers for large rooms and capturing content for post-event use. We provide broadcast-grade systems scaled to the size and complexity of each production, from single static cameras to multi-operator setups.

IMAG systems project live footage to in-room screens, while recording workflows capture both program output and isolated feeds. This ensures clean, high-quality content for editing, archiving, and distribution after the event.

Operators work to pre-agreed shot lists and lower-thirds, ensuring coverage stays consistent, professional, and brand-aligned.

- Broadcast-grade camera systems
- IMAG relay for large venues
- Multi-operator and PTZ setups
- Program + ISO recordings delivered
- Shot lists + graphics pre-approved

By combining live relay and high-quality recording, we maximise both in-room engagement and long-term content value.

Our camera teams understand conference pacing, capturing moments smoothly and delivering assets organisers can use immediately after the event.

Our video teams work side by side with presenters and producers, ensuring transitions, cues, and playback are smooth and stress-free. By combining high-performance servers with skilled operators, we provide not just a screen but a controlled, reliable platform for content that enhances the entire delegate experience.

LIGHTING SYSTEMS

FOCUS THE ROOM — ELEVATE THE EXPERIENCE

Lighting sets the mood and directs attention. We design rigs that balance clean stage washes for presenters with brand accents and dynamic looks for awards and entertainment. Every cue is programmed for smooth transitions, supporting the pace of the event.

Our fixtures include profiles, moving heads, washes, and discreet uplighting, tailored to both the room and the broadcast. This ensures consistent visibility in the space and on camera.

By integrating lighting into the wider design, we create visual cohesion across every part of the event.

- Stage washes for clarity + visibility
- Brand colours and accent lighting
- Cue-driven programming
- Dynamic effects for awards/ reveals
- Camera-safe levels for broadcast

We balance light for both audiences and cameras, ensuring skintones and branding are consistent in person and on screen. Our rigs are designed for efficiency, with neat runs and fast turnarounds that keep transitions smooth between sessions.

We also create dynamic looks for moments that matter, from walk-ons and reveals to award announcements. These effects are programmed in advance but remain flexible to adapt to live changes. With this combination of precision and creativity, lighting becomes a tool that shapes both the energy in the room and the impression that lasts afterwards.

RIGGING SYSTEMS

BUILT FOR SAFETY — ENGINEERED FOR EFFICIENCY

Rigging provides the structural foundation for every technical build - we supply certified systems designed to safely support audio, video, and lighting equipment in any environment. Whether flown from venue rigging points or built on ground-support structures, our solutions are planned with precision to ensure both safety and efficiency.

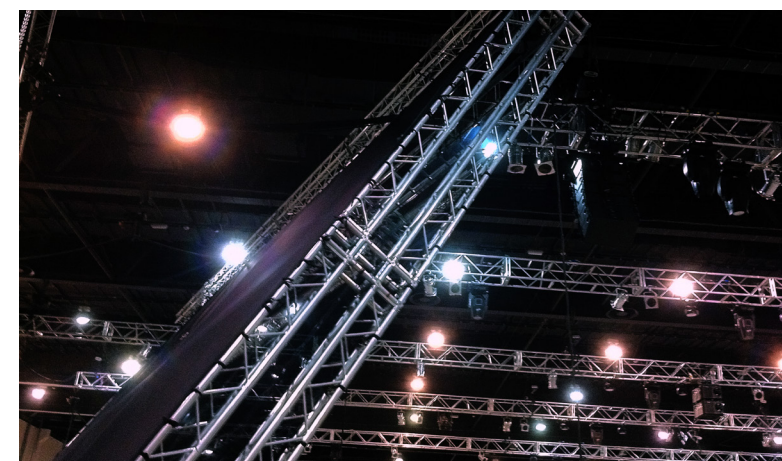

Clean design is just as important as strength. By prioritising neat layouts, tidy truss runs, and clear sightlines, we provide professional rigs that integrate seamlessly into conference halls, exhibition spaces, and plenary venues without cluttering the room.

We create detailed CAD drawings with full load calculations, giving venues, clients, and safety officers the documentation they need for approval. Our approach ensures compliance with UAE and Saudi regulations, while also streamlining the build process.

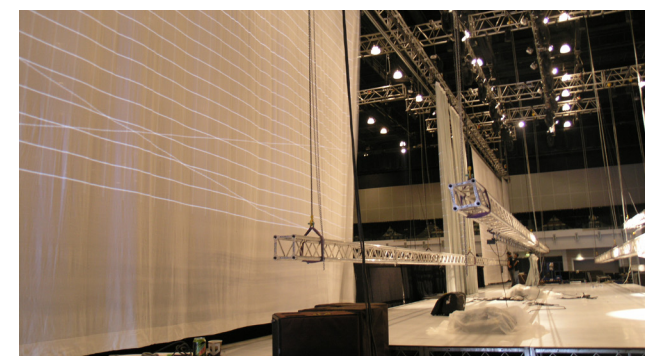

- Certified rigging systems with load calculations
- Ground support options for restricted venues
- CAD drawings for approval and compliance
- Quick installs to maximise rehearsal time
- Clean designs that protect sightlines

By combining tested equipment documentation, technical expertise, and disciplined site practice, we deliver rigging that is both structurally reliable and visually discreet — a safe backbone for the rest of the technical build.

Rigging is the invisible strength that supports every technical element, and our crews treat it with the importance it deserves. Each system is carefully calculated to guarantee safe performance under load. Our focus is also on efficiency. By designing clean, clutter-free rigs with tidy runs and discreet structures, we keep the environment professional and audience-focused. This ensures the technical infrastructure supports the event without ever distracting from the content on stage.

NETWORK SOLUTIONS

CONNECTED SYSTEMS — RELIABLE PERFORMANCE

Modern events rely on robust data networks to keep audio, video, and lighting systems communicating seamlessly. We deploy professional-grade Luminex networking solutions, building infrastructures that are scalable, resilient, and designed to support even the most complex conference or exhibition requirements.

Our networks are configured with segmentation and redundancy, ensuring stable performance even under heavy loads. Real-time monitoring allows our technicians to identify issues before they affect delivery, while VLANs protect data integrity across different systems.

By consolidating multiple systems into a single backbone, we reduce cabling complexity, speed up installation, and deliver greater flexibility. This streamlined approach keeps technical teams efficient and ensures events remain adaptable to last-minute changes.

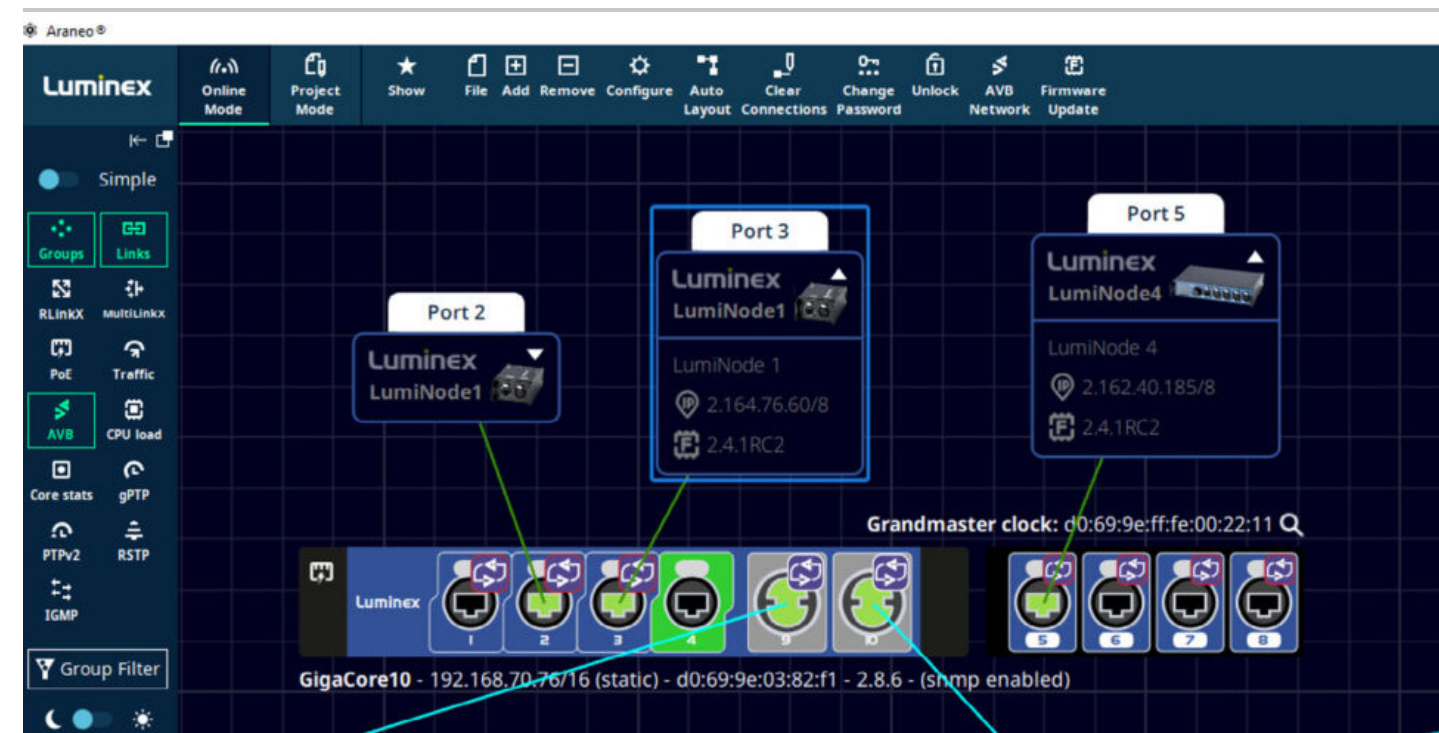

— Unified AVL networks for efficiency

— VLAN segmentation for data integrity

— Redundant paths for stability

— Real-time monitoring of system health

— Configured by experienced technicians

Our systems are built with redundancy and monitoring in place, ensuring audio, video, and lighting cues are never interrupted. This stability allows productions to run with confidence, even in complex, multi-room or hybrid setups.

By consolidating multiple systems into a unified backbone, we reduce complexity and accelerate builds. This approach makes technical workflows more efficient and reduces the risk of errors, allowing crews to focus on delivery rather than troubleshooting. With every device connected and monitored, events remain stable and adaptable from start to finish.

Well-designed networks save time on site, minimise technical risks, and keep crews focused on delivery instead of troubleshooting.

With Luminex as the backbone, every audio channel, video feed, and lighting cue is delivered with accuracy, reliability, and complete control.

POWER SOLUTIONS

RELIABLE SUPPLY — SAFE DISTRIBUTION

Every technical system depends on a stable and reliable power supply. We design and deliver temporary power distribution solutions that scale to the complexity of the event, ensuring all audio, video, lighting, and exhibition systems are supported without risk of interruption.

Redundant supply paths and UPS backup systems are integrated into critical areas, protecting against power loss, surges, or fluctuations. This approach safeguards show-critical elements such as media servers, vision control, and streaming encoders, allowing the event to continue uninterrupted.

All cabling is installed with safety and presentation in mind. Protective covers, tidy routing, and careful placement keep event spaces safe for crews and audiences while maintaining a clean, professional appearance.

- Safe temporary distribution systems
- Redundant paths for key equipment
- UPS backup for mission-critical gear
- Discreet cable runs with protection
- Venue liaison for seamless integration

We coordinate closely with venue managers, facilities teams, and local authorities to ensure compliance with regional safety standards in both the UAE and Saudi Arabia.

By combining safe installation practices with disciplined cable management, we provide power solutions that protect equipment, crews, and audiences while keeping events running smoothly at every stage.

Reliable power is the single most important factor in any technical setup. Our distribution systems are designed to ensure equipment remains protected from overloads, fluctuations, or outages. By integrating redundant paths and UPS backups, we safeguard the systems that matter most, from servers and vision control to key lighting and audio feeds.

We treat cable management with the same discipline as the power itself. Runs are routed neatly, protected with covers, and placed with safety and presentation in mind. This approach keeps sites safe for crews and delegates while also making systems easier to maintain and service during the event.

HEALTH + SAFETY

PLANNED SAFELY — DELIVERED RESPONSIBLY

Safety is built into every Evolution Technical project. From risk assessments and method statements to site protocols, our teams ensure every system is designed, installed, and operated in line with the strictest standards.

We comply fully with UAE and Saudi regulations while working to international best practices. Our ISO 9001, 14001, and 45001 certifications reinforce our commitment to safety, sustainability, and quality at every stage.

Crews are trained, supervised, and briefed to deliver disciplined builds. Every site is managed to remain safe, tidy, and compliant, protecting both crews and audiences.

- Risk assessments + method statements
- Compliance with UAE + Saudi standards
- ISO 9001, 14001 + 45001 certified
- Supervised, briefed, certified crews
- Clean, safe, and controlled sites

Health and safety is not a box-tick exercise. It shapes the way we plan, the way we brief, and the way we deliver every job. By combining accredited systems with experienced supervisors, we create environments where technical solutions are delivered safely, smoothly, and without compromise.

Health and safety is an active part of our process, not a formality. Every build begins with risk assessments and continues with disciplined supervision, operator briefings, and constant monitoring of conditions on site. This ensures crews work in safe environments and audiences are protected at all times.

Our ISO certifications reinforce this culture, embedding safety, quality, and sustainability into everything we do. With clear documentation, structured processes, and experienced supervisors, Evolution Technical guarantees that events are delivered to the highest professional and safety standards without compromise.

OUR PROCESS — FROM DESIGN TO DELIVERY

Most of our projects begin with a client brief, a venue, or a creative concept. Our role is to transform those ideas into safe, reliable, and high-performing technical systems.

Working closely with organisers and creative teams, we develop detailed AVL drawings and specifications, refining layouts and adjusting configurations where needed — always in consultation with the client to ensure the vision is fully supported.

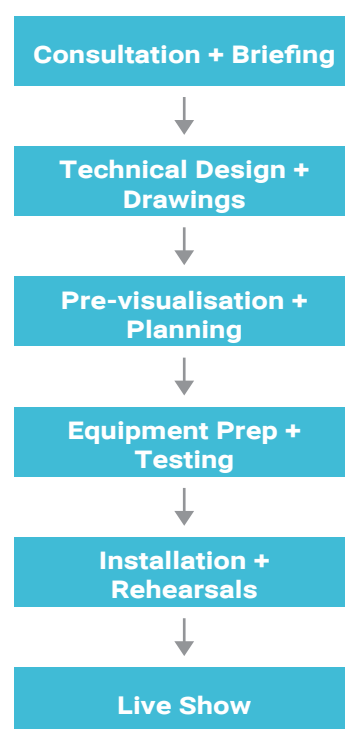

When clients need additional input, our team also assists with technical design, advising on rigging loads, sightlines, power requirements, and networking to ensure every system is practical, efficient, and achievable on site.

The process continues at our facilities in Riyadh and Dubai, where all equipment is prepared, tested, and configured in advance. Systems are built out in our warehouses where required, giving clients confidence that every element is working before it leaves for site.

Once confirmed, our audio, video, lighting, and rigging departments work in sequence to bring the design to life. This preparation allows our crews to install quickly, safely, and accurately during the build phase — ensuring events open on time, with everything operating flawlessly.

From first drawings to final showcall, every stage is managed with collaboration and clear communication, so clients know exactly what to expect at every step.

Bridging creative ideas and technical execution with discipline and expertise.

TECHNICAL DESIGN + ENGINEERING

ENGINEERED FOR SAFETY. DESIGNED FOR PERFORMANCE.

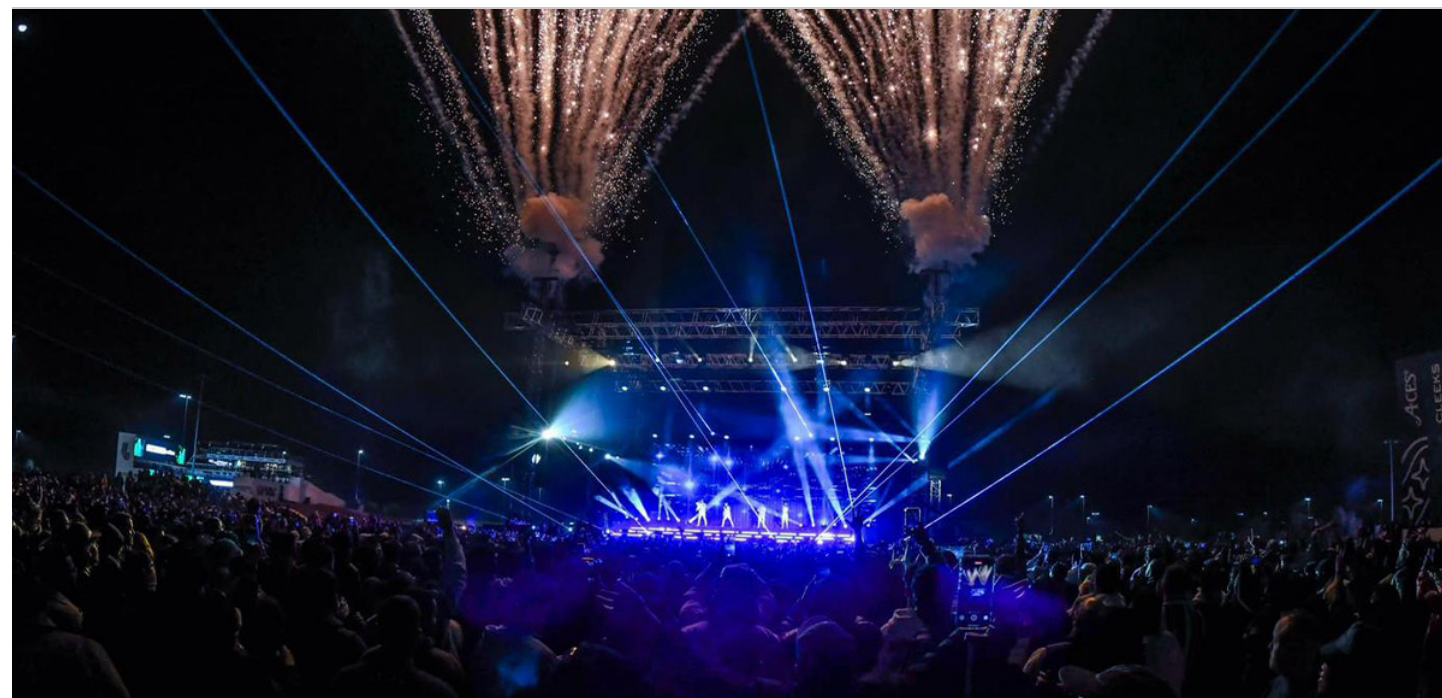

Every technical project begins with precision. At Evolution Technical, we use industry-leading software to translate concepts into build-ready AVL plans. Our team works in AutoCAD, Vectorworks, WYSIWYG, and Depence, ensuring accuracy in rigging plots, power distribution, and AVL design.

Where required, we also provide load calculations, power studies, and signal network diagrams, giving clients the assurance that each system is safe, compliant, and reliable. From compact conference packages to large-scale festival rigs, our technical design process ensures systems are engineered to perform.

By combining planning expertise with advanced digital tools, we bridge the gap between creative ambition and flawless live delivery.

MORE THAN JUST CONFERENCES — COMPLETE TECHNICAL PRODUCTION

From conferences to concerts — technical production
without compromise

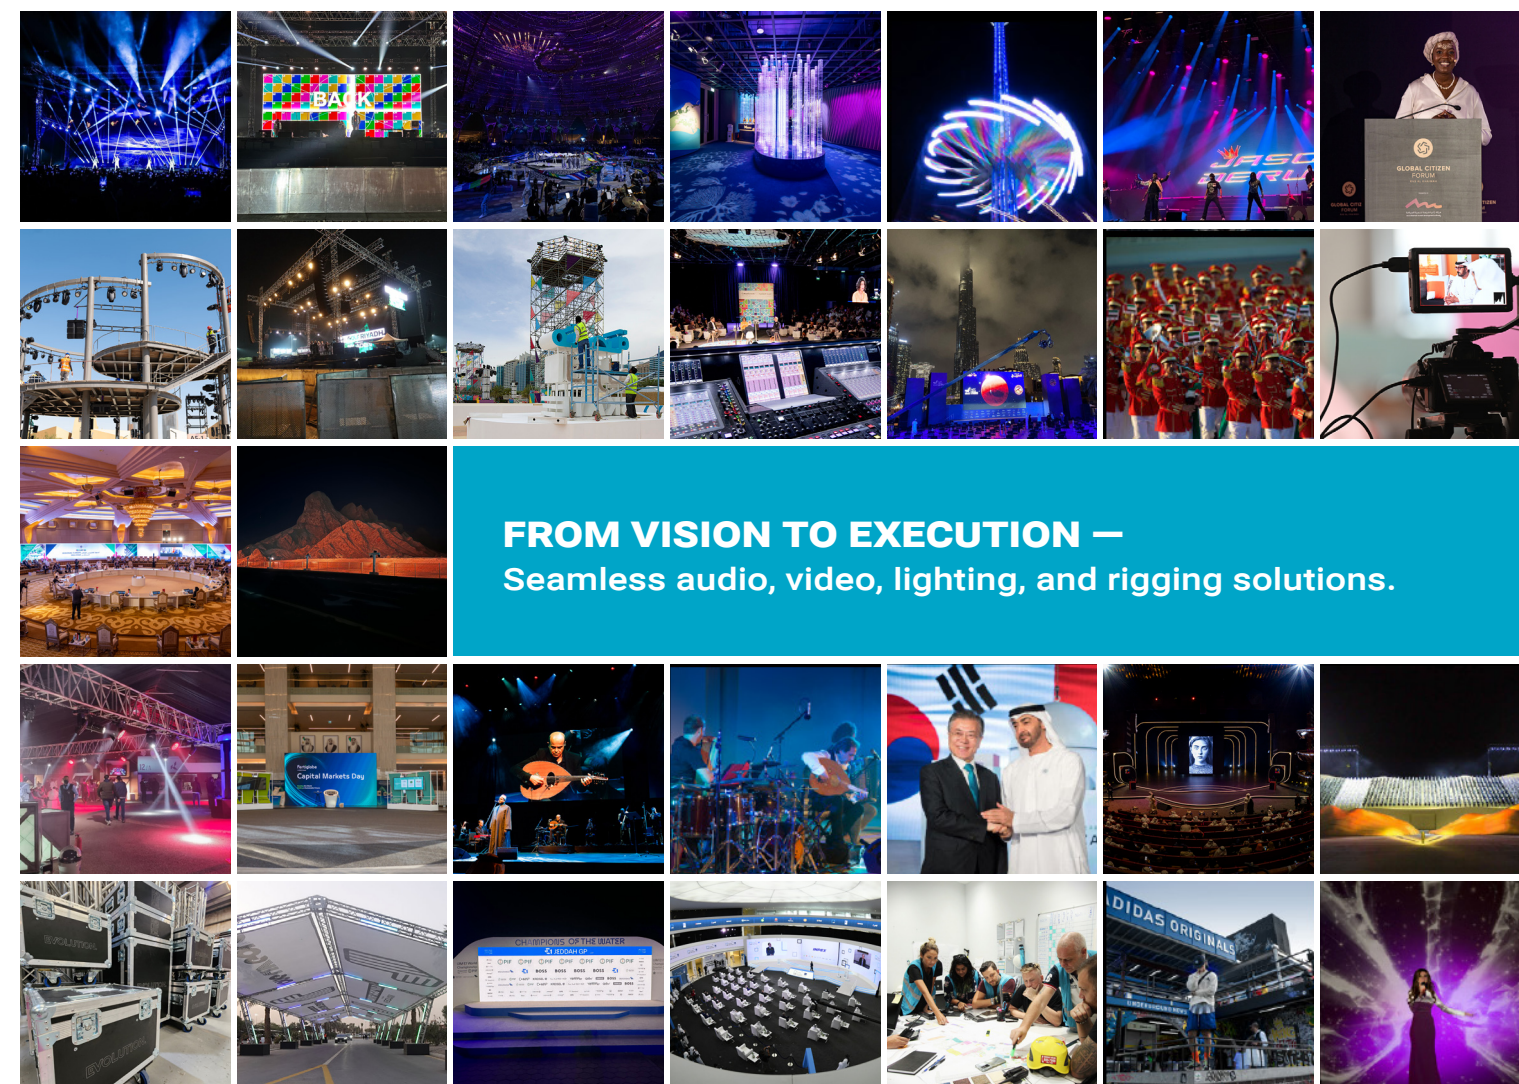

At Evolution Technical, conferences and exhibitions are only one part of what we do. Our full scope covers every aspect of technical production, making us the single partner for events of any scale.

We design and deliver complete AVL systems, including audio, video, lighting, rigging, and automation, supported by pre-visualisation tools and detailed CAD planning. Our teams provide both large-scale solutions for concerts and festivals and finely tuned packages for corporate shows, product launches, and government events.

Specialist media servers and control systems allow us to manage complex playback, multi-screen environments, and interactive content with precision. Our crews operate with ISO-certified safety systems, ensuring every build is compliant, efficient, and delivered to the highest standard.

By bringing all of these capabilities together under one roof, we guarantee consistency, reliability, and impact across every project. Whether it's a single conference room or a multi-day festival, Evolution Technical has the expertise and resources to deliver flawless technical production.

FROM VISION TO EXECUTION —
Seamless audio, video, lighting, and rigging solutions.

20 YEARS OF EXPERIENCE IN THE GCC EVENTS INDUSTRY

For more than two decades, Evolution Services has been delivering site infrastructure and support for some of the biggest events across the GCC.

From large-scale festivals and international exhibitions to high-profile government events, our team has built a reputation for reliability, professionalism, and attention to detail.

What sets us apart is our people.

Our crews, planners, and supervisors bring years of hands-on experience, ensuring every project is completed safely, efficiently, and to the highest standards.

Servicing the UAE + Saudi Arabia, with the
ability to support projects across the GCC

CORPORATE EVENTS

We provide tailored technical solutions for conferences, summits, and corporate gatherings, combining clear audio, engaging visuals, and professional staging that enhance every presentation.

Our teams integrate seamlessly with venues and client teams, ensuring smooth delivery across plenaries, breakouts, and networking areas. Every detail is managed with precision to create a professional delegate experience.

CONCERTS

From intimate venues to large-scale stadium shows, we supply world-class sound systems, LED screens, dynamic lighting, and safe rigging designed for live music.

Our crews deliver scalable packages that adapt to each artist and venue, ensuring flawless performance and audience impact. Every element is engineered for clarity, reliability, and consistency from rehearsal to encore.

THEATRE

We provide specialist technical support for theatre productions, combining immersive lighting, detailed sound design, and theatrical rigging or automation.

From traditional plays to modern shows, our solutions are tailored to enhance performances while ensuring reliability throughout every run. Technical delivery is handled with care, precision, and full compliance with safety standards.

FESTIVALS

We deliver reliable technical solutions for festival environments, including main stages, multi-venue productions, and immersive activations.

Our scalable AVL systems ensure every act is presented with clarity, creativity, and impact. With experience across Saudi Arabia, the UAE, and the GCC, we provide the resources and crews required for world-class festival production.

EXHIBITIONS

Our audio, video, and lighting solutions transform exhibition spaces into engaging environments designed for brand connection.

From interactive displays to dynamic LED features, we create visually striking setups that attract and hold attention. Reliable systems and fast builds ensure exhibitors stand out while meeting the tight schedules of exhibition delivery.

SPECIAL EVENTS

From state ceremonies and cultural celebrations to high-profile one-off productions, we provide bespoke technical solutions designed for impact.

Our crews manage every detail with accuracy and control, ensuring audio, video, lighting, and staging work together seamlessly. Events of national or international importance are delivered with precision and reliability at every stage.

BRAND ACTIVATIONS

We create technical solutions that help brands connect with audiences through immersive AV, dynamic staging, and striking lighting designs.

Every activation is delivered with precision and reliability, ensuring content lands with maximum impact. From product launches to pop-up experiences, our setups are engineered for engagement and memorability.

AWARDS CEREMONIES

We provide full technical production for awards shows, integrating staging with broadcast-quality video, dynamic lighting, and high-impact audio.

From red-carpet arrivals to on-stage celebrations, our systems ensure every moment is delivered with polish and precision. Our goal is simple: to create ceremonies that feel seamless, professional, and unforgettable.

OUR WIDER SERVICES

AUDIO

We design and deliver sound systems for events of every scale, ensuring clear, balanced audio for audiences and performers.

From corporate keynotes to stadium concerts, our solutions are tailored to the space and programme. With robust networks and skilled operators, we guarantee sound that is reliable, natural, and immersive.

AUTOMATION

We deliver motion-control solutions including moving platforms, kinetic set pieces, and precision show-control systems.

Automation adds dynamic impact and creative expression to live events while operating with reliability and safety at its core. Every system is engineered to integrate seamlessly into the wider technical production.

VIDEO

Our video solutions include LED screens, projection mapping, and live streaming, all designed to enhance engagement.

With advanced control systems and skilled technicians, we manage seamless playback, switching, and recording. Every display is sharp, reliable, and tailored to the event's format and content requirements, ensuring impact both in-room and online.

TECHNICAL DESIGN

Our design service provides CAD planning, 3D modelling, and pre-visualisation to ensure every system is practical and efficient before it reaches site.

This preparation reduces risk, secures early approvals, and helps clients visualise outcomes clearly. Designs are delivered with accuracy and precision at every stage of the process.

LIGHTING

We provide lighting solutions that set the tone, focus attention, and bring creative impact to events of every type.

From corporate stages to outdoor festivals, our rigs balance atmosphere with function, ensuring presenters, performers, and brands are shown at their best. Lighting is designed for live and broadcast delivery alike.

TECHNICAL PRODUCTION

We manage complete technical production, from pre-production and AVL integration to crew coordination and on-site delivery.

By bringing every discipline under one roof, we ensure consistency, efficiency, and accountability. Our structured approach gives clients the confidence that their event will be delivered seamlessly, on time, and to specification.

RIGGING

Our rigging solutions provide the safe structural backbone for audio, video, and lighting systems.

Our team provides CAD drawings, load calculations, and compliance documentation, ensuring venues and clients have full assurance. From flown systems to ground supports, we design rigs that are safe, efficient, and unobtrusive in presentation.

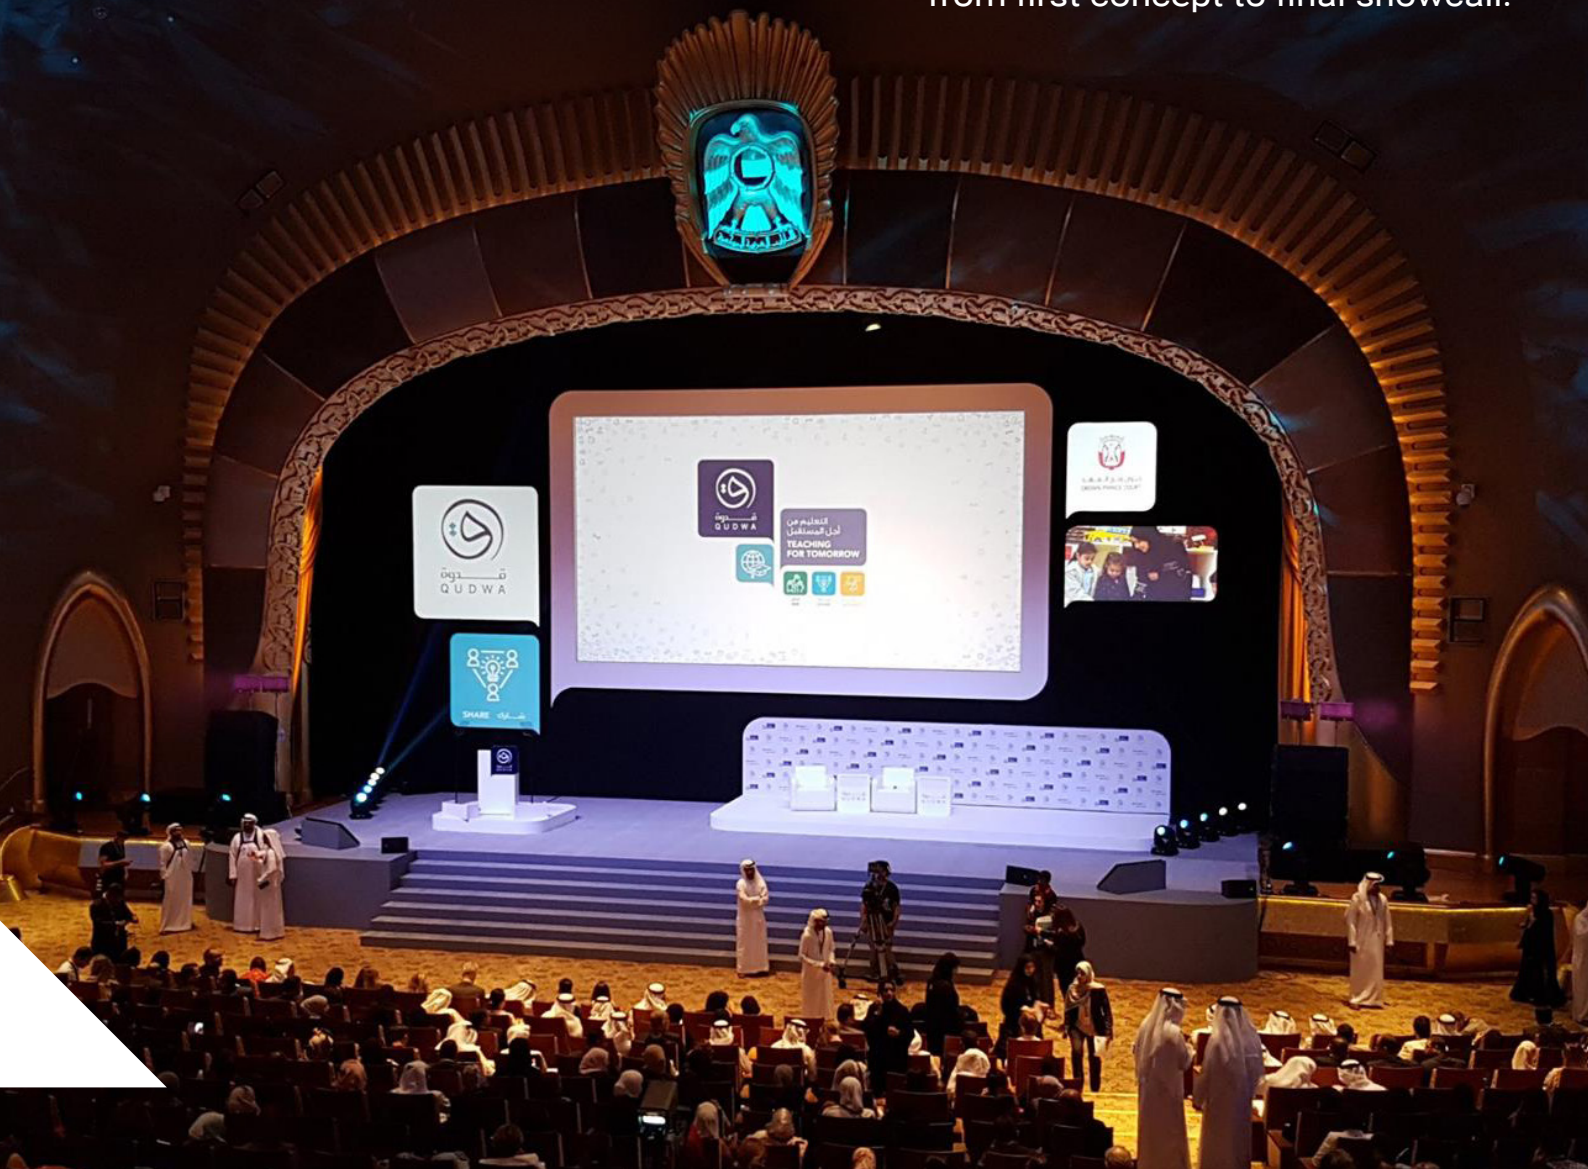

HEALTH & SAFETY

Health and safety underpins every project we deliver. Risk assessments, method statements, and strict site protocols ensure our crews work to the highest standards.

With ISO certification and compliance across UAE and Saudi regulations, we create environments that protect audiences, staff, and clients without compromise.

CREATING IMPACT WITH TECHNICAL PRECISION

Where expertise, reliability, and creativity align
